

2-Way Brace

3-Way Brace

Girder

Braces

This section displays three red structural components. The 2-Way Brace is a T-shaped piece with a central square hole and two perpendicular arms. The 3-Way Brace is a similar T-shaped piece but with three arms. The Girder is a long, curved beam with a series of square holes along its length and a protruding end.

Double Snap Block

Mini Curved Beam

Small Curved Beam

Beam

Half Beam

Riser

Single Snap Block

Structural Building Components

This section displays various structural building components. The Beam is a long grey beam with a series of square holes. The Half Beam is a shorter version of the same beam. The Riser is a vertical grey component with a square hole. The Block is a red square component with a central square hole. The Double Snap Block is a yellow square component with four protruding tabs. The Mini Curved Beam is a curved orange beam with two square holes. The Small Curved Beam is a curved red beam with five square holes. The Single Snap Block is a dark grey square component with two protruding tabs.
